## Adenosine Deaminase, Pleural Fluid

Order Name: ADENO DEAM

Test Number: 3660750 Revision Date: 12/12/2022

TEST NAME			METHODOLOGY	LOINC CODE
Adenosine Deaminase, Pleural Fluid			Quantitative Spectrophotometry	35704-6
SPECIMEN REQUIRE	MENTS			
Specimen	Specimen Volume (min)	Specimen Type	Specimen Container	Transport Environment
Preferred	0.5 mL (0.2 mL)	Pleural Fluid	Sterile Screwtop Container	Frozen
Instructions	Special Instructions: Testing	ainer specimens in leak-proof contain referred to ARUP TC 3002978 24 hours, Refrigerated : 1 week		

Expected TAT  3-8 Days  Clinical Use  Adenosine deaminase (ADA) is an endogenous tissue enzyme which is released into the serum in patients with many different types of	
Clinical Use Adenosine deaminase (ADA) is an endogenous tissue enzyme which is released into the serum in patients with many different types of	
malignancies and infections, including viral hepatitis, infectious mononucleosis, typhoid fever, and tuberculosis. It is the most useful single test in portal hypertension (ascites) associated with liver cirrhosis. In pleural fluid, elevated ADA levels are very commonly associated with tuberculosis, although increased ADA activity may be found in effusions due to a number of causes, including TB, bacterial infections, rheumatologic disease, and lymphoproliferative disorders. In CSF, ADA is elevated in cases of tuberculous meningitis.	gle
